We will prepare improvement plans with horizontal and vertical alignments of the proposed storm drain including demolition plans as necessary for the existing storm drain.

We understand the project to include:

- We will provide a topo of the existing streets improvements, utilities and right way for those area proposed for the new storm drain and demolition of existing.
- We will be available during bidding and construction for questions and assistance.
- Attend required construction coordination management meetings.

We also understand that the City of Sparks may retain Atkins to look at the initial stormwater modeling and expand on it if necessary. We understand that this is not part of our scope.

With that we proposed to provide the following scope of services.

Topographic Survey

Odyssey Engineering will developed field topographic information for the plans. This includes locations existing above ground utility evidence to help verify existing underground utility locations from as-built information. Dips and verification of inverts of existing storm drain and sewer. Right of Way and adjacent ownership included.

Topographic Survey **\$15,000.00**

ODYSSEY ENGINEERING PROPOSED SCOPE OF WORK

We will utilize the field topographic survey for the construction drawings.

We will provide final improvement plans, to include:

**RE: Proposal to Perform a Geotechnical Investigation
Goldy Way at Barring Blvd Storm Drain Improvements
Sparks, Nevada**

Dear Mr. Bidart:

Black Eagle Consulting, Inc. (BEC) is pleased to submit the following proposal to perform a geotechnical investigation and associated laboratory testing in order to develop geotechnical design recommendations for the referenced project. We understand the project will involve design and construction of upgrades to or replacement of existing storm drain lines in the area of Goldy Way near its intersection with Baring Boulevard including lines along segments of Woodstone Drive, Rockwood Drive and Glen Meadow Drive. Approximately 3,000 feet of storm drain is involved in this project. The depth of the storm drain line were not available to us at this time.

Our scope of work will include research, field exploration, field and laboratory testing, and engineering analyses to allow formulation of geotechnical recommendations for design and construction of this project. All of the above items will be summarized in a report suitable for use by project design team members and for submittal to governing agencies.

Research associated with this proposal included a review of published geologic maps and fault hazard reports to establish the presence of any documented geologic hazards along the alignment. Existing geotechnical reports for other projects in the area will also be reviewed, as available, to supplement information obtained during this investigation.

Black Eagle Consulting, Inc. will obtain utility clearance from Underground Service Alert (USA) prior to exploration. Additionally, BEC will obtain an excavation and encroachment permit through the City of Sparks and provide traffic control during our exploration program. Exploration of the proposed alignment will be performed by drilling a series of 8 test borings to depths of about 15 to 20 feet below the existing pavement grade. All borings will be advanced using hollow-stem auger drilling techniques. We have budgeted to mobilize a high-torque out-of-town drill rig to advance the borings to the target depth with the anticipated difficult drilling conditions in the subsurface soils. The locations and the depths of the borings will be coordinated with you prior to exploration. Soils will be sampled with a two-inch-outside-diameter split-spoon sampler driven by a standard 140-pound drive hammer with a 30-inch stroke. The number of blows to drive the sampler 1 foot into undisturbed soil (standard penetration test) is an indication of the density and shear strength of the material. Larger diameter in-place samples will be taken if compressible or expansive soils are present. Material encountered during exploration will be logged in the field by geotechnical personnel. The groundwater surface will be measured if encountered. Representative soil samples will be returned to our Reno laboratory for testing.

Upon completion of exploration, the borings will be backfilled and the asphalt will be patched with commercially available asphalt patch material or non-shrink grout.

Representative samples of significant soil types will be tested in the laboratory to characterize the index properties of foundation soils, such as moisture content, grain size distribution, and plasticity. These index properties are indicative of the mechanical behavior of the soils. Moisture-density testing will be conducted on selected samples that will require density testing during backfill of the project. Chemical testing will also be performed to evaluate the site soils' potential to corrode buried steel and PCC.

The results of our research, site exploration, laboratory testing, and engineering analyses will allow formulation of geotechnical recommendations for the design and construction of this project. These recommendations will be summarized in a geotechnical report that will cover:

- **brief geology, seismicity and geologic hazards**
- **site soil and groundwater information**
- **corrosion potential**
- **excavation and trenching characteristics**
- **site preparation/stabilization**
- **grading**
- **structural and trench backfill requirements**
- **structural sections for asphalt pavement patching**
- **aggregate base sections for concrete slabs**
- **site drainage**
- **erosion control**
- **identification of recognizable construction problems**

The cost for these services will be \$17,800.00. We assume the fee for the encroachment permit through the City of Sparks will be waived. We will initiate our City of Sparks permit process immediately upon authorization. We can begin exploration within 5 days of obtaining the permit, subject to drill rig availability. Verbal recommendations can be advanced within 10 days following exploration. A final report will be available within 4 weeks following exploration. The final report can be completed sooner, if necessary, to meet project scheduling.

Unless BEC executes a contract to the contrary, all geotechnical work will be conducted in accordance with the attached Professional Services Agreement. If the terms of the contract and the scope of this proposal are acceptable, please execute the Professional Services Agreement, make a copy for your records, and return the executed agreement as your authorization for BEC to proceed. The Professional Services Agreement shall be binding on both parties if work is started prior to its execution. The proposed lump sum cost noted above for geotechnical investigation includes an allowance for design coordination up until the final geotechnical report is

issued. As requested, a fee estimate for additional meetings and geotechnical consultation during the design phase (after the issue of the final geotechnical report) is provided above.

We wish to thank you for the opportunity to submit this proposal and look forward to the possibility of working with you on this project.

Sincerely,
