# Statement of Work

## LOCATION

Pah Rah Park, Sparks, NV 89434

## SITE PREPARATION & INSTALLATION

1. Installation of approximately 9,940 square feet of EasyTurf Playground Turf with a 10' CFH. Installation includes 2 layers of 2.125" EasyTurf Playground Pad by a certified FieldTurf Installer, Contractor's License #68127, 72965, 45382A

### EasyTurf Playground Turf

EasyTurf Playground Turf is comprised of premium Field Green Duraspine blades that closely simulate the look and feel of natural grass. It is made using 100% polyethylene fiber construction containing no nylon and features the proprietary MaxxFlow Drainage System. EasyTurf Playground Turf was designed for both residential and commercial applications, and this high quality synthetic grass is ideal for main gate areas, headquarter lawns, housing areas, public walkways, obstacle courses, parks and common areas. It significantly reduces water consumption, eliminates the need for harmful fertilizers and pesticides, and improves drainage and erosion control.

### EasyTurf Playground Pad

EasyTurf PlayGround Pad is a water-permeable safety pad that is installed beneath EasyTurf PlayGround Turf. One layer of PlayGround Pad is rated for fall height safety of up to 8 feet, and exceeds all ASTM requirements. Padding can also be double stacked to provide fall height safety ratings of up to 12 feet. Studies show that falls to the surface contribute for up to 80% of all playground injuries. EasyTurf's PlayGround Turf and Pad system, plus a 100% crumb rubber infill, can dramatically improve the safety of play areas.

2. Supply and install Patented Infill System with silica sand and crumb rubber.
3. Clean area and complete final inspection.
