

3rd quarter presenters from
Dilworth Stem Academy

The 7th grade tackled how to design a park that would support an ecosystem, incorporate scale drawings, and argue why their park best meets the needs of the community.

The top team members are: Nicole Siron, Emyle Paredes, Maria Tiasegua, and Karylle Dumaguing. The teams had to research and design a park that is sustainable. Students were helped in their research by Karen Melby, Brian Cason, and George Graham who attended a question and answer session at the school.

The 8th grade concentrated on "Water: What is the matter?" and the top team members are: Ysabella Lindsay, Alan Cortes, and David Alvarez.

The team had to demonstrate a functioning water filtration system, create a proposal for water conservation, and research and create a display of a local water source. Part of the 8th graders research included a tour of TMWRF.

The Community Life Skills presenters are Frank Ford and Victor Meza. They also tackled designing a park.
